Light and Great-value Solutions Which Meet SMBs' Core Demands for Cyber Security Management

SMB

Solutions for SMB

SMBs pay growing attention to network management and cyber security; however, they are facing many challenges in searching solutions……

Limited IT information

SMBs have extremely limited IT resources, as a result, SMBs might not afford complicated network management solutions.

Small network scales

SMBs are small in scale, but still need relevant network management functions; especially with business growth, effective management becomes more critical.

Information security threats

SMBs often neglect information network security and often get threatened externally, thus, they need suitable solutions to ensure the stability and security of their company networks.

Consideration about financial costs

SMBs are sensitive to the concept of cost, so they need economical and affordable solutions which can meet their demands and don't result in financial burdens.

Cloud-ground Service, Easy to Set

Easy to set and easy to manage

UPAS, by virtue of its exclusive patented technology, can realize IP/MAC asset inventory and device access compliance inspection, without requiring change in network architecture, for both cloud and ground setting.

Economical and affordable, and emotional protection

The light procurement scheme, exclusive for SMBs, is suitable for enterprises below 50U-200U(included), painless importing, emotional protection, and simple operations.

Easy and quick to operate

UPAS is designed to be with direct and simple UI, and has the "one-page management" interface to help users understand environmental information quickly and do relevant setting.

Automatic setting, better efficiency

As SMBs have limited resources, UPAS' automatic mechanism, with the functions of software/hardware asset management, remote operations and software distribution, can reduce enterprises' manual interference to enhance efficiency.

Respond to trends and expand defence

UPAS provides basic schemes for IP/MAC asset management, device access management, software and hardware management, software distribution, remote desktop, etc.; it also provides advanced schemes for Windows KB update inspection, management of required, blocked and copyrighted software and software vulnerabilities, antivirus inspection, etc.

Security policies, comprehensive protection

Through the protection functions of various modules, UPAS can discover and solve network problems quickly and precisely. It not only can provide real-time monitoring but also has the bypass function to ensure network stability.

UPAS Solutions for SMBs

Basic Scheme

ARP Scanner

ARP

- Data collection an device identification without Agent installation required
- 100% asset inventory
- IP/MAC management
- Network blocking
- Network access control
- Device information multi-binding
- IP management
- Prevention of IP conflict
- Prevention of MAC simulation

Remote Operations Management

ROM

- Remote operations management
- Remote desktop management
- File sending
- Software deletion
- Silent install
- Information push and group broadcast
- Remote device control and maintenance
- Software and hardware histories

Advanced Extension Modules

Patch Management

PM

- List of software of intranet-accessed devices
- Windows operating system version/KB
- Antivirus software information and virus signature versions
- The quantity of required, blocked and copyrighted software and version inspection
- Network disconnection and page redirection
- Authority setting
- Assisted setting of automatic software patching (with ROM)

Vulnerability Alert and Notification System

VANS

- Conversion into the CPE format of software list Automatic detection of software vulnerabilities
- One-click upload of CPE report
- CVE/CPE/device vulnerability detection
- Decentralized management/exporting/ upload of reports
- Installed software/Microsoft CVE vulnerability inspection
- NVD vulnerability database integration

UPAS

solutions for SMBs are suitable for companies with less than 200U

Professional, Dedicated and Trustworthy

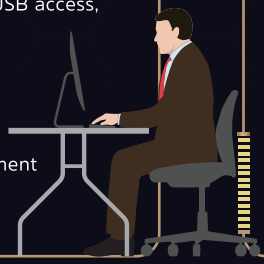

Information Director, semiconductor giant enterprise in Taiwan

「UPAS can realize rapid importing, and effectively integrate intranet information. When reporting situations to the Cyber Security Officer, I could state the intranet management policies in detail and make the organization effectively focus on threats and risks.」

Information Specialist, Central Administrative Organ

「Civil servants' network devices and access authority are regulated, and devices are under many restrictions, such as: blocked software, USB access, etc. UPAS can respond to our demands with restricted management methods.」

Information Director, a well-known bank in Taiwan

「The government has strict audit standards, there are management mechanisms that banks need to comply with, such as ISO 27001, NIST CSF, etc.; UPAS can automatically solve the heavy responsibility of management, and assist in perfecting auditing through over 30 types of reports.」

3800+

Being trusted by customers, such as central departments, police affairs and national defence organs, local governments, financial institutions, semiconductor enterprises, technological industries, key infrastructure enterprises, education and academic units, retail industry, companies, etc.; be professional and dedicated to building the zero trust architecture for customers, and provide resilient cyber security defence.

100+

Transnational companies with over 10000 IPs
