The 18th Japanese Olympiad in Informatics (JOI 2018/2019) JOI Open Contest

July 14, 2019

## Triple Jump

There is a very long straight road, which consists of $N$ sections numbered from 1 through $N$. Each section has specific firmness, and the firmness of the section $i(1 \leq i \leq N)$ is $A_{i}$.

JOI-kun, the gifted sport star, is going to play triple jump. A triple jump consists of three consecutive jumps. Let $a, b, c$ be the numbers of sections at which JOI-kun takes off, then the following conditions should be met.

- $a<b<c$. Namely, the numbers of the sections should be increasing.
- $b-a \leq c-b$. Namely, the jumping distance of the first jump should be less than or equal to the jumping distance of the second jump.

JOI-kun is going to perform $Q$ triple jumps. In the $j$-th $(1 \leq j \leq Q)$ triple jump, he should take off at sections whose numbers are in the range of $L_{j}$ to $R_{j}$. In other words, $L_{j} \leq a<b<c \leq R_{j}$ must be hold.

JOI-kun wants to take off at firmer sections. For each triple jump, JOI-kun is curious to know the maximum sum of firmness of the sections at which JOI-kun takes off.

Write a program that, given the number of sections and the information of triple jumps, calculates for each triple jump the maximum sum of firmness of the sections at which JOI-kun takes off.

## Inputs

Read the following data from the standard input. All the values in the input are integers.

$$
\begin{aligned}
& N \\
& A_{1} A_{2} \cdots A_{N} \\
& Q \\
& L_{1} R_{1} \\
& L_{2} R_{2} \\
& \vdots \\
& L_{Q} R_{Q}
\end{aligned}
$$

## Outputs

Write $Q$ lines to the standard output. The $j$-th $(1 \leq j \leq Q)$ line should contain the maximum sum of firmness of the sections at which JOI-kun takes off in the $j$-th triple jump.

July 14, 2019

## Constraints

- $3 \leq N \leq 500000$.
- $1 \leq A_{i} \leq 100000000(1 \leq i \leq N)$.
- $1 \leq Q \leq 500000$.
- $1 \leq L_{j}<L_{j}+2 \leq R_{j} \leq N(1 \leq j \leq Q)$.

## Subtasks

1. (5 points) $N \leq 100, Q \leq 100$.
2. (14 points) $N \leq 5000$.
3. (27 points) $N \leq 200000, Q=1, L_{1}=1, R_{1}=N$.
4. (54 points) No additional constraints.

## Sample Input and Output

| Sample Input 1 | Sample Output 1 |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| 5 |  |  | 12 |  |
| 5 | 2 | 1 | 5 | 3 |
| 3 |  |  | 9 |  |
| 1 | 4 |  | 12 |  |
| 2 | 5 |  |  |  |
| 1 | 5 |  |  |  |

In the first jump, JOI-kun can achieve the maximum sum of 12 by taking off at the sections 1,2 and 4.
In the second jump, JOI-kun can achieve the maximum sum of 9 by taking off at the sections 3,4 and 5 . If he takes off at the sections 2,4 and 5 , the sum of firmness is 10 , but $b-a \leq c-b$ is not satisfied.

In the third jump, JOI-kun can achieve the maximum sum of 12 by taking off at the sections 1,2 and 4 . If he takes off at the sections 1,4 and 5 , the sum of firmness is 13 , but $b-a \leq c-b$ is not satisfied.

| Sample Input 2 | Sample Output 2 |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
| 5 |  |  | 14 |  |
| 5 | 4 | 4 | 5 | 4 |
| 1 |  |  |  |  |
| 1 | 5 |  |  |  |

This sample input satisfies the constraints for Subtask 3.

| Sample Input 3 | Sample Output 3 |
| :---: | :---: |
| 15 | 277 |
| $\begin{array}{llllllllllllllllllllll}12 & 96 & 100 & 61 & 54 & 66 & 37 & 34 & 58 & 21 & 21 & 1 & 13 & 50 & 81\end{array}$ | 227 |
| 12 | 72 |
| 115 | 262 |
| 312 | 178 |
| 1114 | 181 |
| 113 | 174 |
| 59 | 257 |
| 46 | 208 |
| 614 | 262 |
| 25 | 262 |
| 415 | 113 |
| 17 |  |
| 110 |  |
| 813 |  |
