InfO(1) CUP 2018
Second edition National Round

The grade

## The Grade

## Maximum time of execution: 0.5 seconds/test. Maximum available memory: 512 MB

AlekuKebap is in his math class. While he tries to figure out why $1+1=2$, his teacher was writing on the board a slightly more complicated problem. There are given $\mathbf{Q}$ queries and a list $\mathbf{S}$ with $\mathbf{P}$ elemnts equal with 0 . Let $\mathbf{A}$ be initially an empty set. The querries can be:

- $0 x$ (insert value $x$ in set $A$ )
- $1 x$ (erase the value $x$ from set $\mathbf{A}$, it is guaranteed that the value $x$ exists in set $\mathbf{A}$ )

It is guaranteed that $\mathbf{A}$ will never be empty after a query. After every query, the teacher asks Aleku the following question: can I arrange in list $\mathbf{S}$ all elements from the set $\mathbf{A}$ (not necessary in the order from the A) so that:

- Elements form $\mathbf{A}$ will be put on distinct standings, the rest being occupied by $\mathbf{P}$ elements equal with 0
- Let $\mathbf{S}[\mathbf{i}]$ be a positive element from $\mathbf{S}$ and $\mathbf{S}[\mathbf{j}]$ the closest positive element from $\mathbf{S}$ that is located to the left of $\mathbf{S}[\mathbf{i}]$, then the following condition mus be respected: $\mathbf{i - j} \mathbf{i} \mathbf{S}[\mathbf{i}]$.
- Let $\mathbf{f}$ be the first positive element from the left of $\mathbf{S}$, then $\mathbf{f} \geq \mathbf{S}[\mathbf{f}]$.

If the answer to this question is yes, then find how many different configurations can be obtained. Because the answer can be very big, print the answer modulo $\mathbf{1 . 0 0 0 . 0 0 0 . 0 0 7}$.If the answer is no, print -1 .

## TASK

Help AlekuKebap to answer correctly to all teacher's questions to recive a 10 grade. HIS AVERAGE DEPENDS ON THIS GRADE!!

## INPUT FORMAT

The first line contains two integers $\mathbf{Q}$ and $\mathbf{P}$.
The next $\mathbf{Q}$ lines contain the description of every query.

## OUTPUT FORMAT

Every line will contain the answer to every question from the $\mathbf{Q}$ questions.

## SUBTASKS

- YOU HAVE TO PRINT THE ANSWER MODULO 1.000.000.007.
- All numbers that will be added in the set are $\leq 1.000 .000$.
- WARNING!!! If the answer for a query is no, print $\mathbf{- 1}$ !!!
- WARNING !!!Alecu is not a kebap, he is a human being but this is his name. He is actually a captain...THE CAPTAIN.

InfO(1) CUP 2018

The grade

| Subtask | Score | Restrictions |
| :---: | :---: | :---: |
| 1 | Another 10 points | $\boldsymbol{Q}<=22, \boldsymbol{P}<=22$ <br> and all the values that will be at the <br> same time in A will be equal |
| 2 | Another 10 points | $\boldsymbol{Q}<=100.000, \boldsymbol{P}<=3000$ <br> and all the values that will be at the <br> same time in A will be different |
| 3 | Another 20 points | $\boldsymbol{Q}<=100.000, \boldsymbol{P}<=3000$ |
| 4 | Another 15 points | $\boldsymbol{Q}<=100.000, \boldsymbol{P}<=100.000$ <br> and all the values that will be at the <br> same time in A will be equal |
| 5 | Another 15 points | $\boldsymbol{Q}<=100.000, \boldsymbol{P}<=100.000$ <br> and all the values that will be at the <br> same time in A will be different |
| 6 | Another 20 points | $\boldsymbol{Q}<=100.000, \boldsymbol{P}<=100.000$ <br> 7 |
