## Task 2: Lost Array

Rar the Cat has an array $X$ of $N$ positive integers. He is a teacher and he wants to give his students a homework based on his array. The students in his class had learnt the min function, and Rar would like to test them on this. He have already set $M$ homework questions, and all of them are of this form:

$$
\min \left(X_{i}, X_{j}\right)=?
$$

Unfortunately, Rar has lost his array! Given the $M$ homework questions, as well as the answer key, help Rar to reconstruct a possible array that matches all of his homework answers. Such an array is guaranteed to exist.

## Input

Your program must read from standard input.
The first line of the input will contain 2 numbers, $N$ and $M$.
The next $M$ lines of input will contain 3 numbers, $A_{i}, B_{i}$, and $C_{i}$. For all $i=1,2, \ldots, M$, $\min \left(X_{A_{i}}, X_{B_{i}}\right)=C_{i}$.

## Output

Output $N$ numbers in a single line (separated by spaces), the array $X$. If multiple solutions exist, all of them will be accepted. All elements of $X$ must be between 1 and $10^{9}$ (inclusive).

## Subtasks

The maximum execution time on each instance is 1.0 s. For all testcases, the input will satisfy the following bounds:

- $1 \leq N, M \leq 10^{5}$
- $1 \leq A_{i}, B_{i} \leq N$
- $A_{i} \neq B_{i}$
- $1 \leq C_{i} \leq 10^{9}$

Your program will be tested on input instances that satisfy the following restrictions:

| Subtask | Marks | Additional Constraints |
| :---: | :---: | :---: |
| 1 | 5 | $N=2, M=1$ |
| 2 | 6 | $M \leq 3$ |
| 3 | 20 | $N, M \leq 1000$ |
| 4 | 21 | $C_{i} \leq 10, N \leq 5$ |
| 5 | 48 | - |

## Sample Testcase 1

This testcase is valid for all subtasks.

|  | Input |  | Output |  |
| :--- | :--- | :--- | :--- | :--- |
| 2 | 1 |  | 9 | 7 |
| 2 | 1 | 7 |  |  |

## Sample Testcase 1 Explanation

The reconstructed array satisfies the given constraints:

- $\min \left(X_{2}, X_{1}\right)=\min (7,9)=7$

## Sample Testcase 2

This testcase is valid for subtasks 3,4 and 5 .

|  |  | Input |  |  | Output |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 5 | 6 |  |  | 1 | 4 | 1 | 5 |  |  |
| 1 | 2 | 1 |  |  |  |  |  |  |  |
| 3 | 5 | 4 |  |  |  |  |  |  |  |
| 1 | 5 | 3 |  |  |  |  |  |  |  |
| 1 | 3 | 3 |  |  |  |  |  |  |  |
| 2 | 3 | 1 |  |  |  |  |  |  |  |
| 2 | 4 | 1 |  |  |  |  |  |  |  |

## Sample Testcase 2 Explanation

The reconstructed array satisfies the given constraints:

- $\min \left(X_{1}, X_{2}\right)=\min (3,1)=1$
- $\min \left(X_{3}, X_{5}\right)=\min (4,5)=4$
- $\min \left(X_{5}, X_{1}\right)=\min (5,3)=3$
- $\min \left(X_{1}, X_{3}\right)=\min (3,4)=3$
- $\min \left(X_{3}, X_{2}\right)=\min (4,1)=1$
- $\min \left(X_{4}, X_{2}\right)=\min (1,1)=1$

## Sample Testcase 3

This testcase is valid for subtasks 3 and 5.

| Input | Output |  |  |
| :--- | :--- | :--- | :--- |
| 5 | 1 |  | 12310000000003426311337 |
| 1 | 2 | 123 |  |

## Sample Testcase 3 Explanation

The only condition for the array is that $\min \left(X_{1}, X_{2}\right)=123$, the rest of the array can be any value between 1 and $10^{9}$.
