

# How to run Fingo demo on GearVR

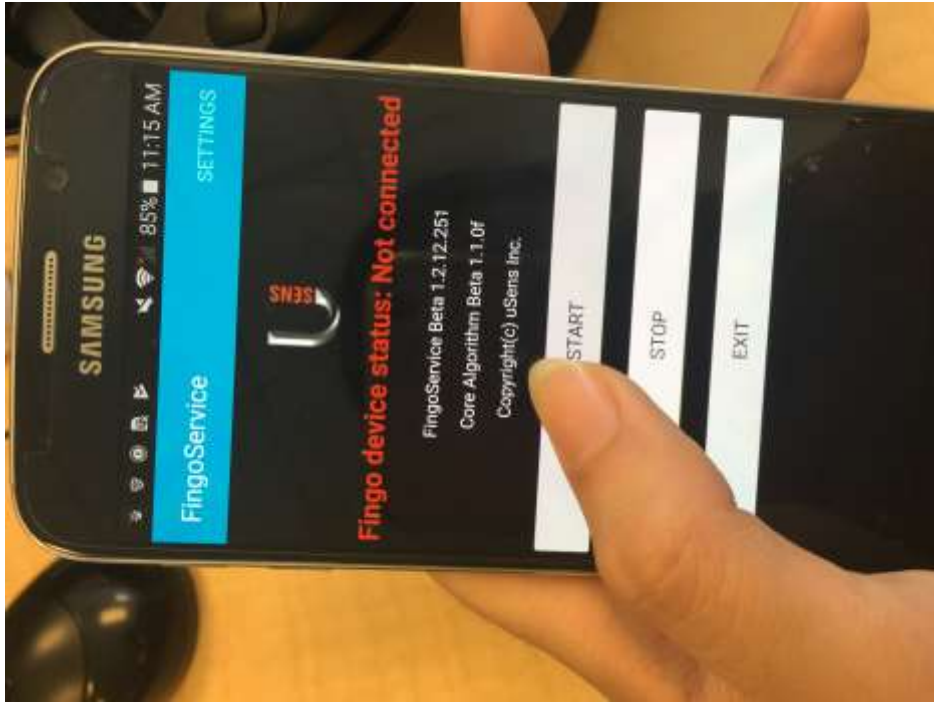

**1. Uninstall Fingo Service and Camera Fi if they are installed on your phone.**

**2. Install Fingo Service (Need FingoService 1.2.12+ to use with GearVR, you can download it in our latest FingoSDK on [developers.usens.com](http://developers.usens.com)).**

**3. Connect Fingo Device with the phone using the Micro to Micro USB.**

**4. Open the Fingo Service app, and click start to get it running.**

**5. Disconnect the phone with Fingo Device and connect Fingo Device with headset using the Type-C to Micro USB.**

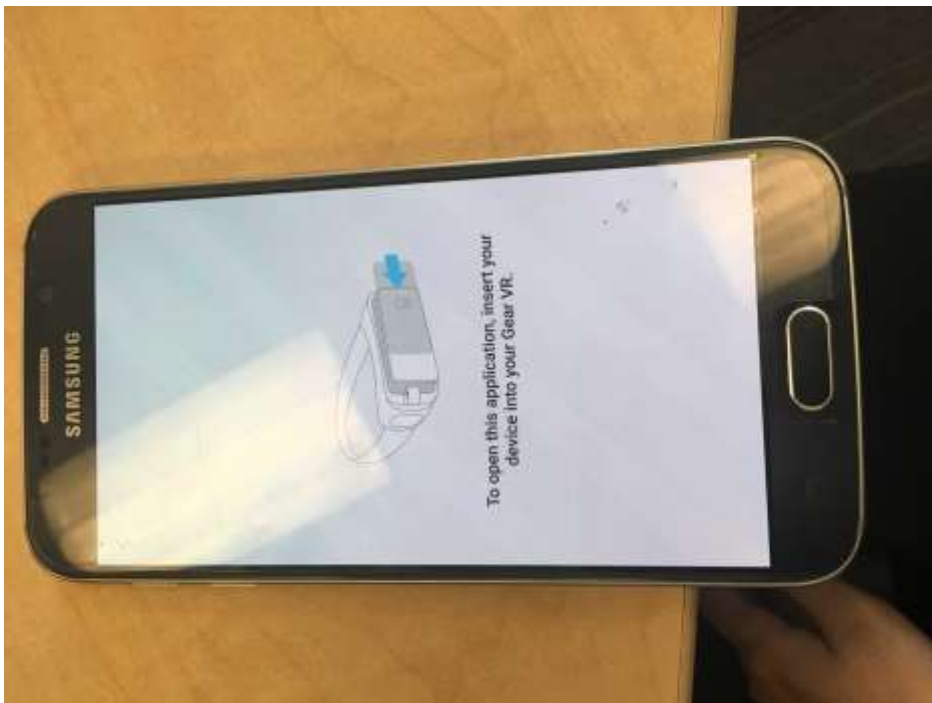

Note: The type-c convertor that comes with GearVR (attached below) will NOT work.

6. Click on the Gear VR app before you insert the phone into the headset.

**7. Insert the phone into the headset.**

**8. Observe if a hand appears in the screen when you put your hand in front of the camera. If there is a hand, it is a success. If not, it is a fail.**

**9. Repeat the steps above two more times and record the success rate out of three times in total.**

**10. After you have done everything above, *If you Open Camera Fi before* you open the Fingo Service app. It is OK if it says it is not connected. Then repeat all the other steps above.**
