

CARBON NEUTRALIZATION WITH MHI CENTRIFUGAL CHILLER

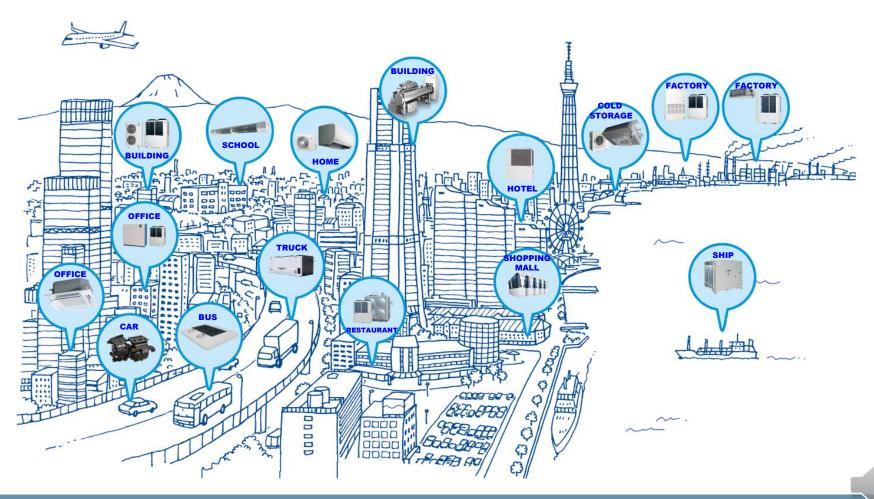

We deliver you comfortable space

with high energy efficiency thermal solutions friendly to global environment

with high energy efficiency thermal solutions friendly to global environment

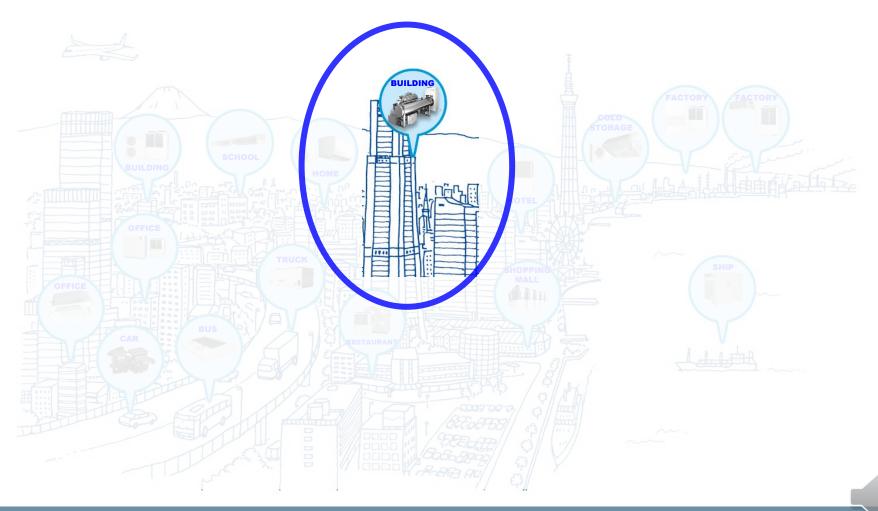

Air-conditioners, Heat pump, Centrifugal chiller

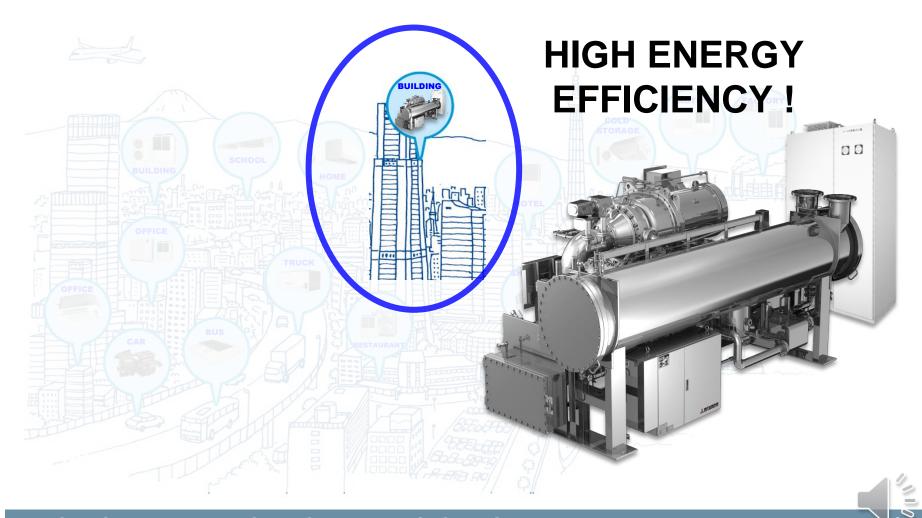

with high energy efficiency thermal solutions friendly to global environment

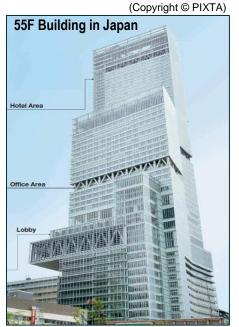

Introduction of Centrifugal chiller

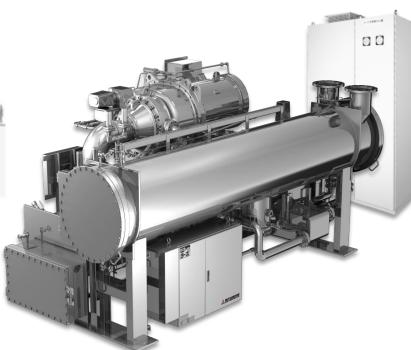

Building Air conditioning

Installed at the underground level (Copyright © PIXTA)

One Centrifugal chiller can cover about 2000 units Air-Conditioner!

Cooling capacity of 2000 units room Air-Conditioner

(Case of Air-Conditioner cooling capacity is 3.5kW)

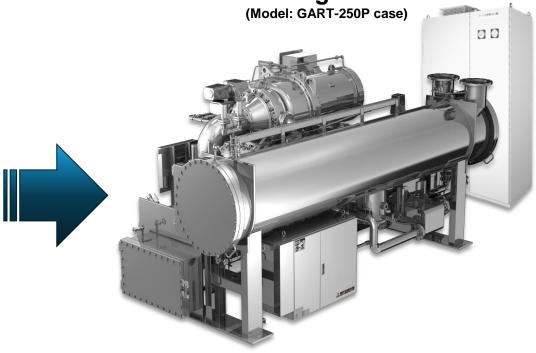

Cooling capacity of one unit

Centrifugal Chiller

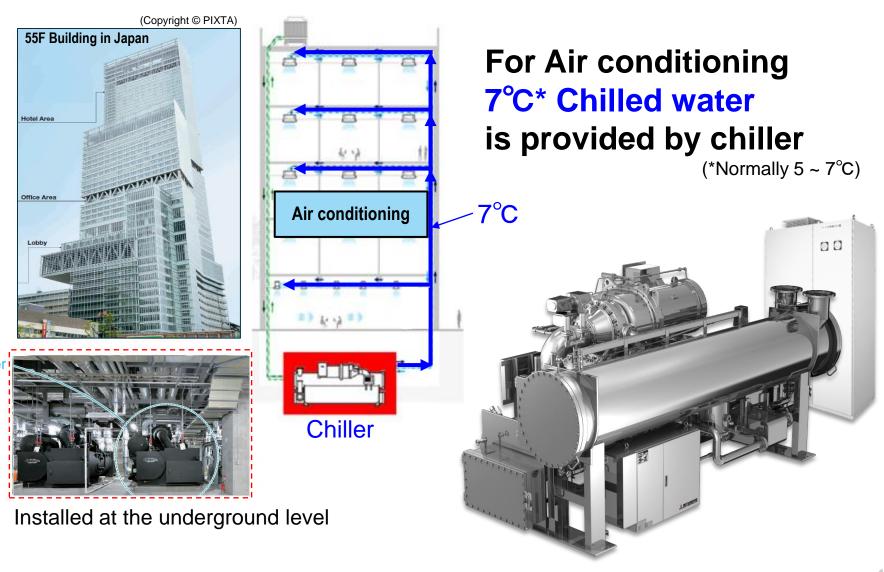

HOW CHILLER WORKS?

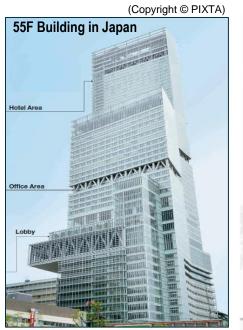

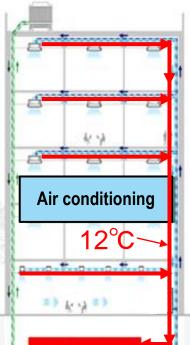

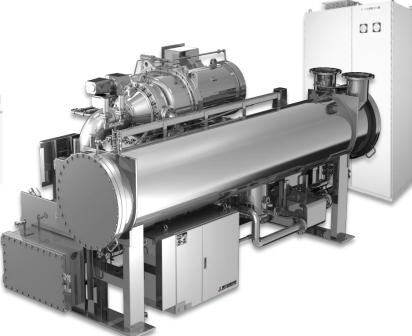

12°C water return to chiller, and water is cooled down from 12*°C to 7*°C by chiller

(*It depends on the condition)

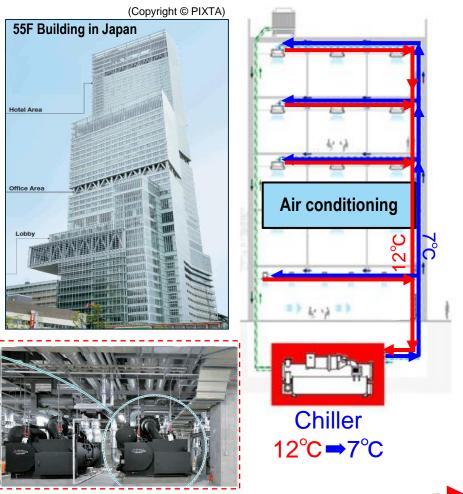

Chiller 12°C →7°C

Installed at the underground level

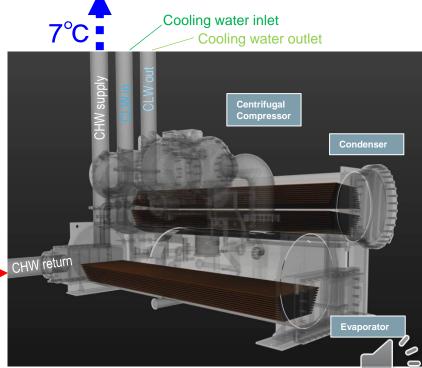

For Air conditioning
7°C* Chilled water
is provided by chiller
continuously

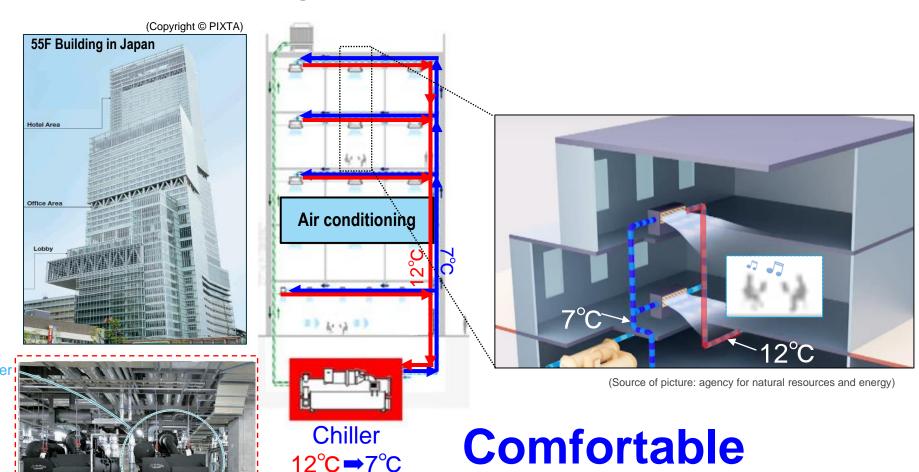

(*Normally $5 \sim 7^{\circ}C$)

12°C

Installed at the underground level

MHI Centrifugal chiller is,

1) High efficiency cooling system

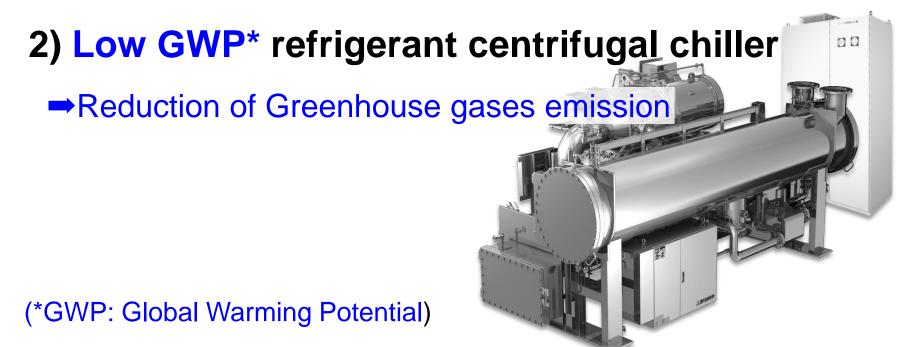

2) Low GWP* refrigerant centrifugal chiller

(*GWP: Global Warming Potential)

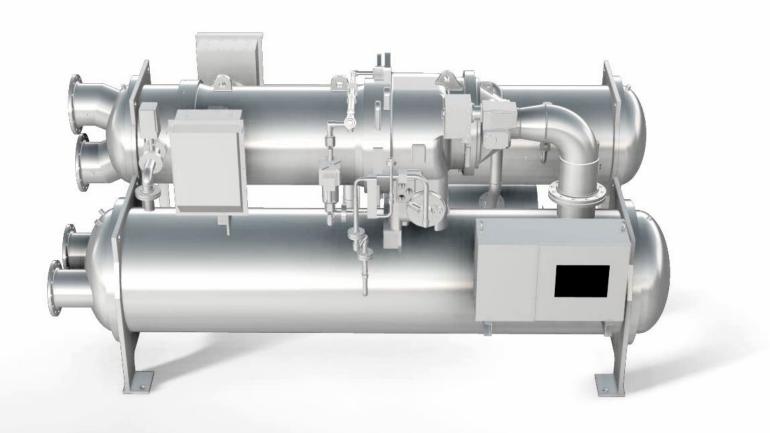

- 1) High efficiency cooling system
 - →Less energy, Reduction of CO2 emission

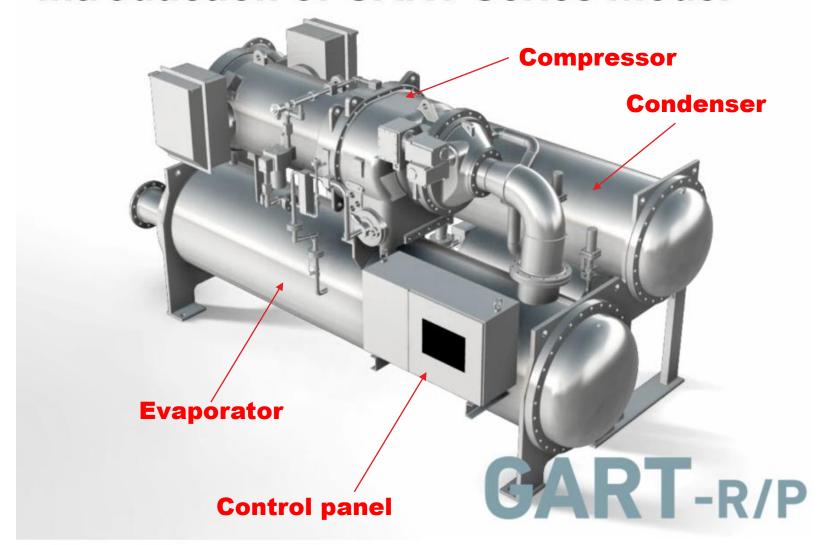

Introduction of GART Series model

GART-R/P

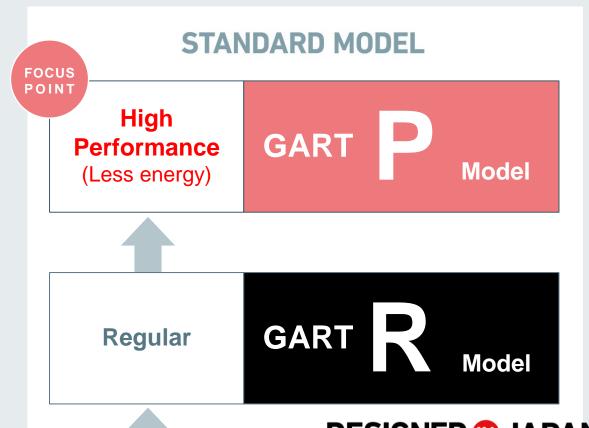

Introduction of GART Series model

MHI Centrifugal Chiller: GART Series

GART

DESIGNED 1 JAPAN

BASIC TECHNOLOGIES

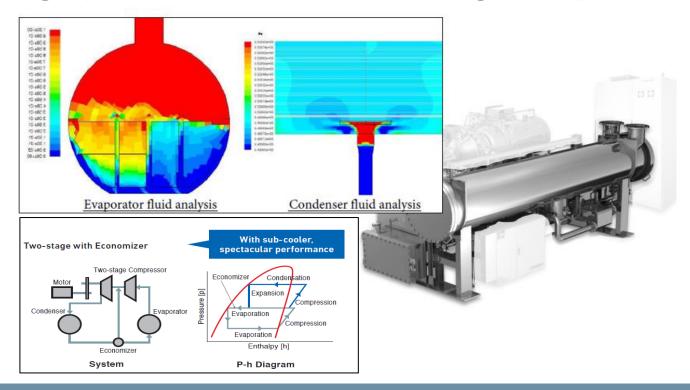

- 1) High efficiency cooling system
 - ·High performance heat exchangers, optimized cycle
 - Centrifugal compressor by MHI technology
 - Variable speed control for part load operation
 - Ene-Conductor for the total heat source system

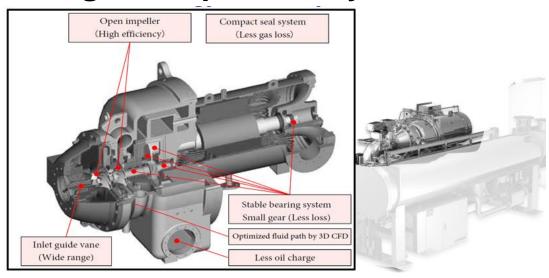

1) High efficiency cooling system

·High performance heat exchangers, optimized cycle

ENERGY SAVING IS ACHIEVED!

→ REDUCTION OF CO2 EMMISION

Case introduction: CO2 emission reduced case study

Reduction of CO2 emission with MHI Centrifugal chiller

Case introduction: CO2 emission reduced

Before

Variable Speed Drive MHI Centrifugal Chiller (Previous Model NART-I Series)

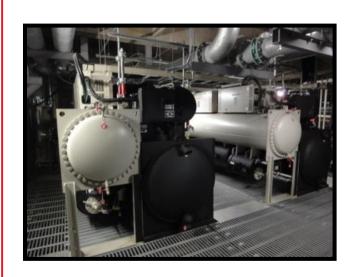

Variable Speed Drive MHI Centrifugal Chiller (Existing Model ETI Series)

Ene-Conductor

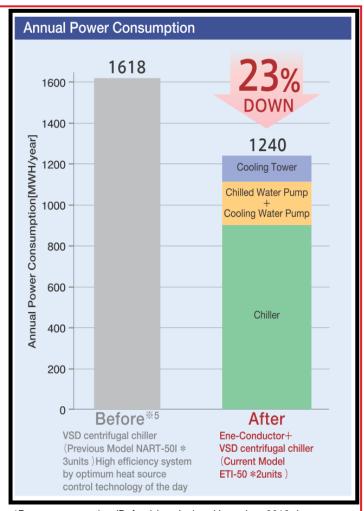

Reduction of CO2 emission with MHI Centrifugal chiller

Case introduction: CO2 emission reduced

*CO2 emission was calculated using CO2 emission factor 0.546kg-CO2/kWh (FY2011 actual record by Tohoku Electric Power Co., Inc.)

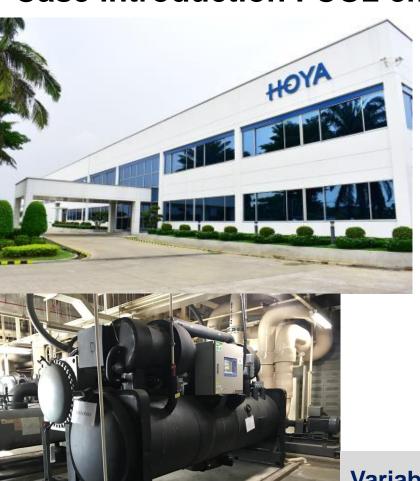

*Power consumption (Before) is calculated based on 2012 data divided by 2004 System COP 5.9 (Above is case in Japan)

Reduction of CO2 emission with MHI Centrifugal chiller

Case introduction: CO2 emission reduced

Energy Saving & Cost Reduction Effect (comparison with the other brand's existing chiller)

■ Annual Electric Power Consumption (Result)

864.8_{MWh}

About 35%

Reduction

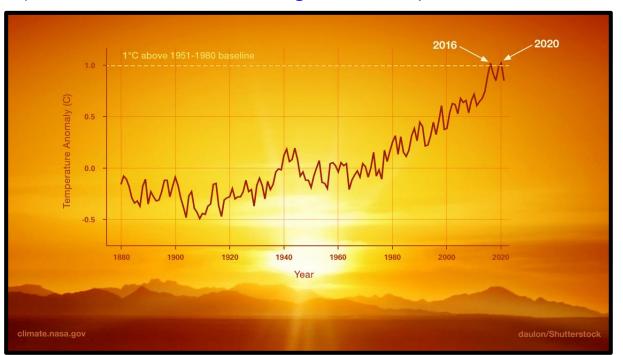

Variable speed drive centrifugal chiller 500 RT x 1 unit (ETI-50)

- 2) Low GWP* refrigerant centrifugal chiller
 - → Reduction of Greenhouse gases emission

(*GWP: Global Warming Potential)

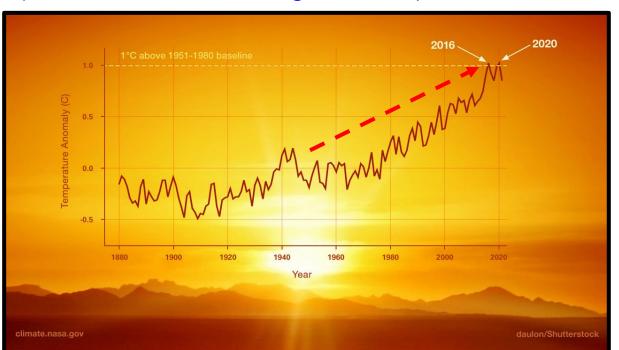

2) Low GWP* refrigerant centrifugal chiller

→ Reduction of Greenhouse gases emission

(*GWP: Global Warming Potential)

Montreal Protocol "Kigali Amendment" (2016)

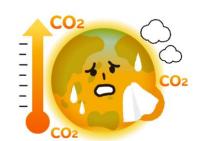

CO2

HFCs(Hydrofluorocarbons) are added as substances requires gradual phasedown, because HFCs are Greenhouse Gases many times more potent than CO2.

Montreal Protocol "Kigali Amendment" (2016)

HFCs(Hydrofluorocarbons) are added as substances requires gradual phasedown, because **HFCs are**

Greenhouse Gases many times more potent than CO2.

Refrigerant	CFC (Chlorofluorocarbons)		HCFC (Hydrochlorofluorocarbon)		HFC (Hydrofluorcarbons)		HFO (Hydrofluoroolefin)		
	R11	R12	R22	R123	R245fa	R134a	R1234yf	R1234ze(E)	R1233zd(E)
GWP *2 (Global Warming Potential)	4660	10200	1760	79	858	1300	< 1	< 1	1
ODP *3 (Ozone Depletion Potential)	1	1	0.055	0.02	0	0	0	0	≒ 0

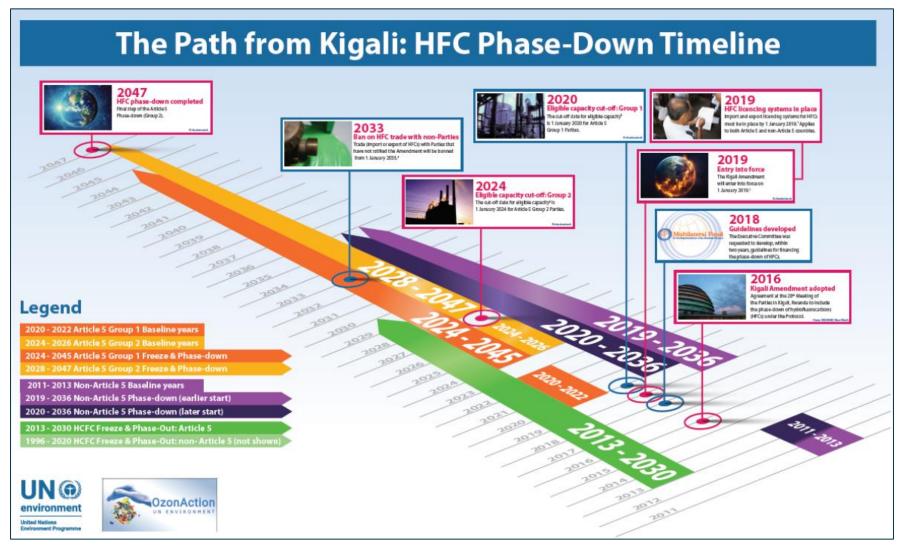

^{*1.} Greenhouse gases warm the Earth by absorbing energy and slowing the rate at which the energy escapes to space.

^{*2.} GWP is the heat absorbed by any greenhouse gas in the atmosphere, as a multiple of the heat that would be absorbed by the same mass of carbon dioxide (CO2). GWP is 1 for CO2. GWPs listed are IPCC 5th report (2013), 100-year GWPs.

^{*3.} ODPs is the relative amount of degradation to the ozone layer it can cause.

^{*3.} ODPs is the relative amount of degradation to the ozone layer it can cause.

GART-ZE, ZEI series

HFO-1234ze(E) is applied.

Low GWP Refrigerant HFO-1233zd(E) Next generation centrifugal chiller Variable speed Series

ETI-Z series

HFO-1233zd(E) is applied.

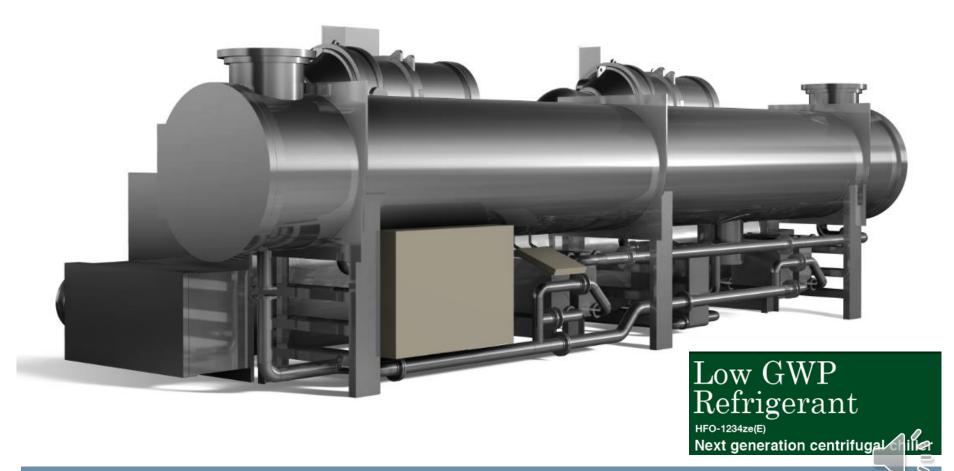

GART-ZE, ZEI series

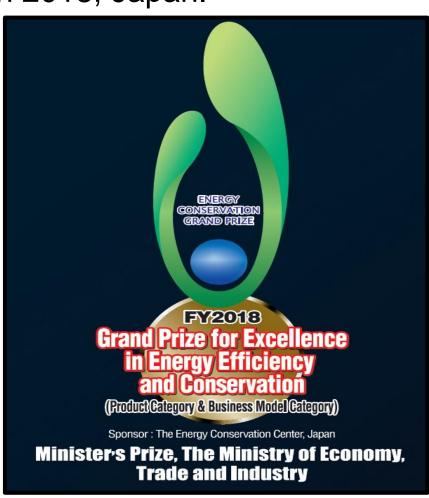

Up to 5000USRt can be applied by GART-ZE.PL (Dual compressor)

ENERGY CONSERVATION GRAND PRIZE is awarded

in 2018, Japan.

ETI-Z series

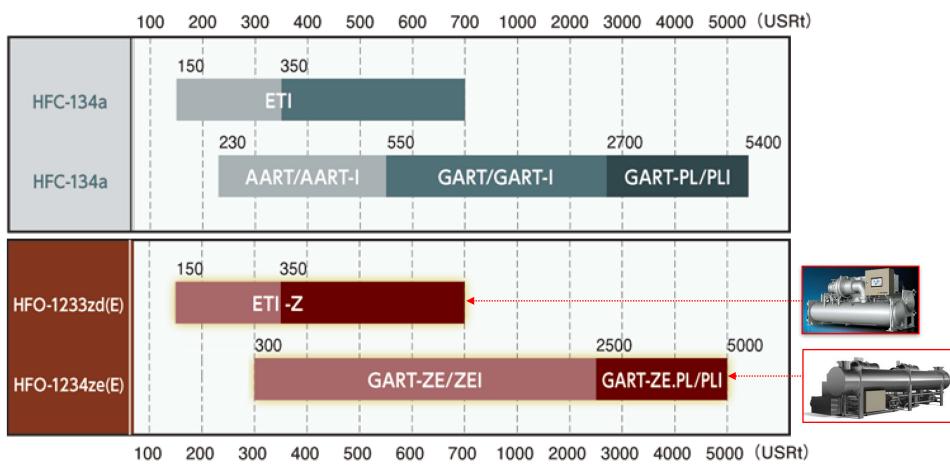

MHI Centrifugal chiller

for HFC-134a and HFO-1234ze(E), 1233zd(E)
