# Energy Management System

What is EMS & Features

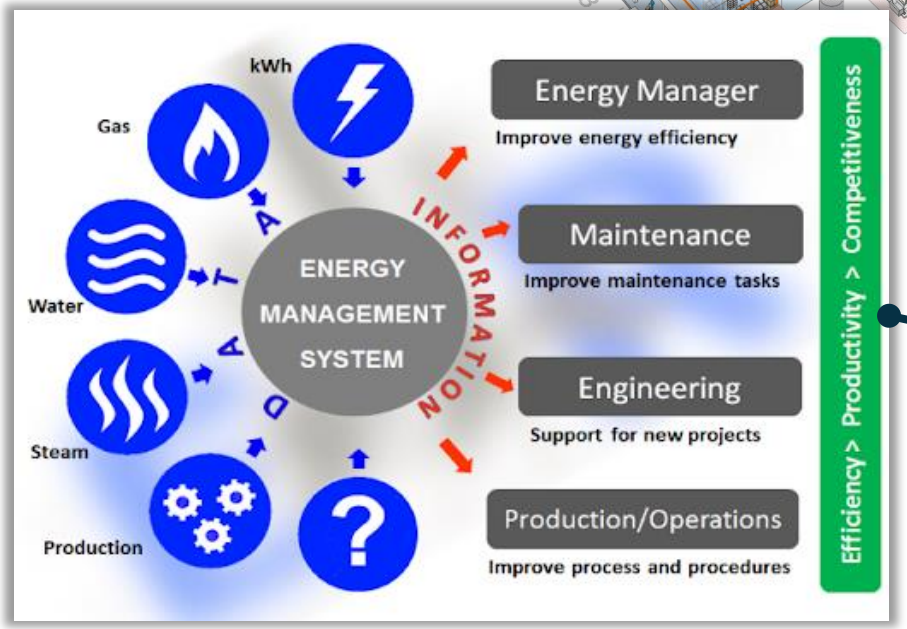
MITSUBISHI HEAVY INDUSTRIES (THAILAND)

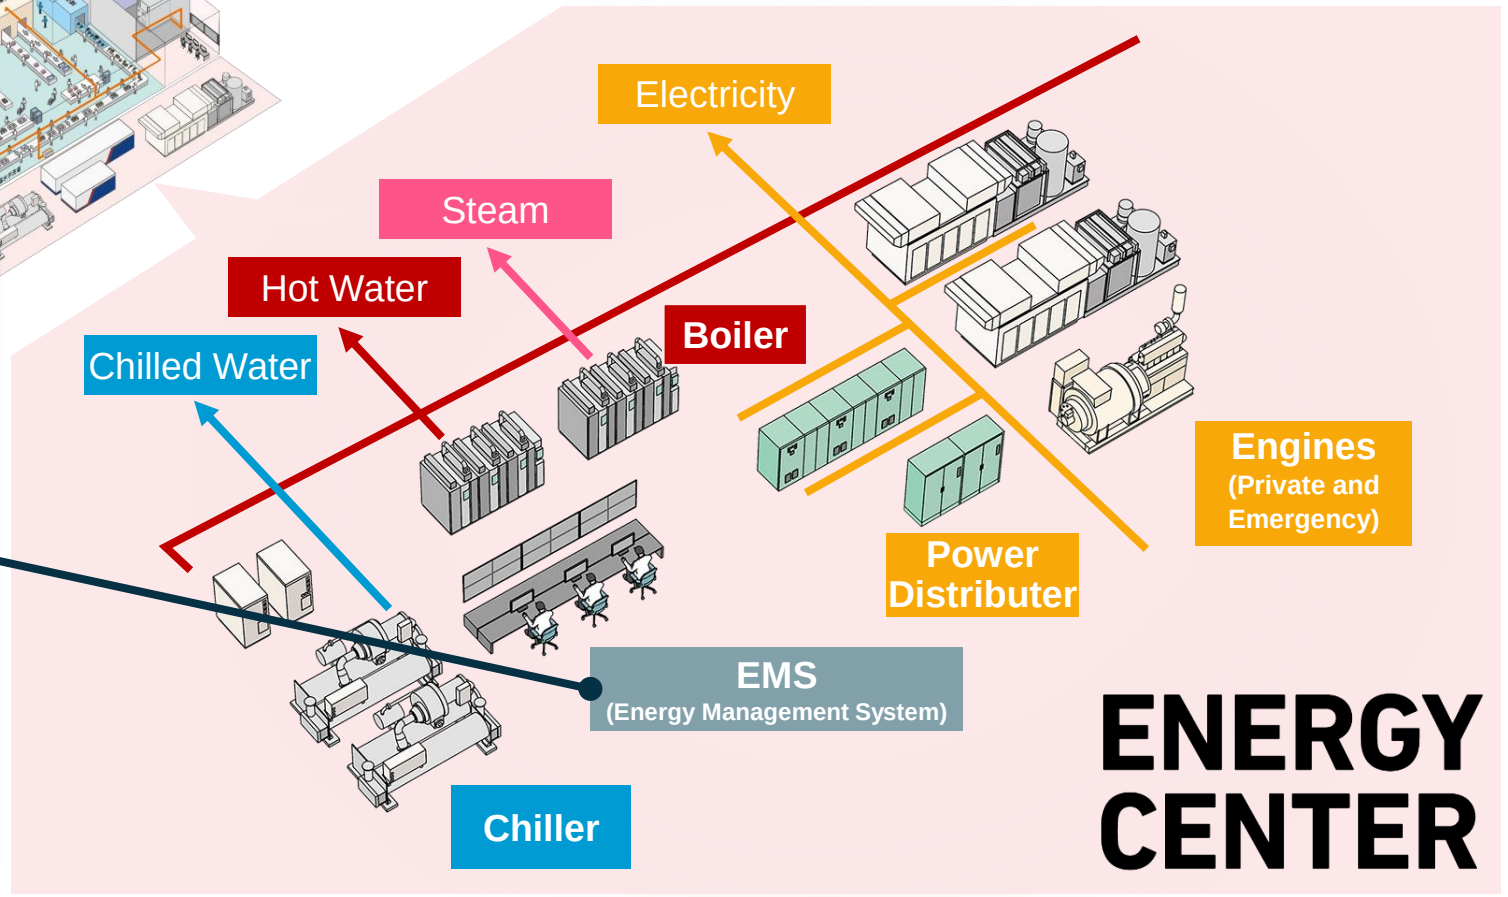
# Energy Management System

CONFIDENTIAL

A single system managing the whole factory utilities is the final goal of our expectation.

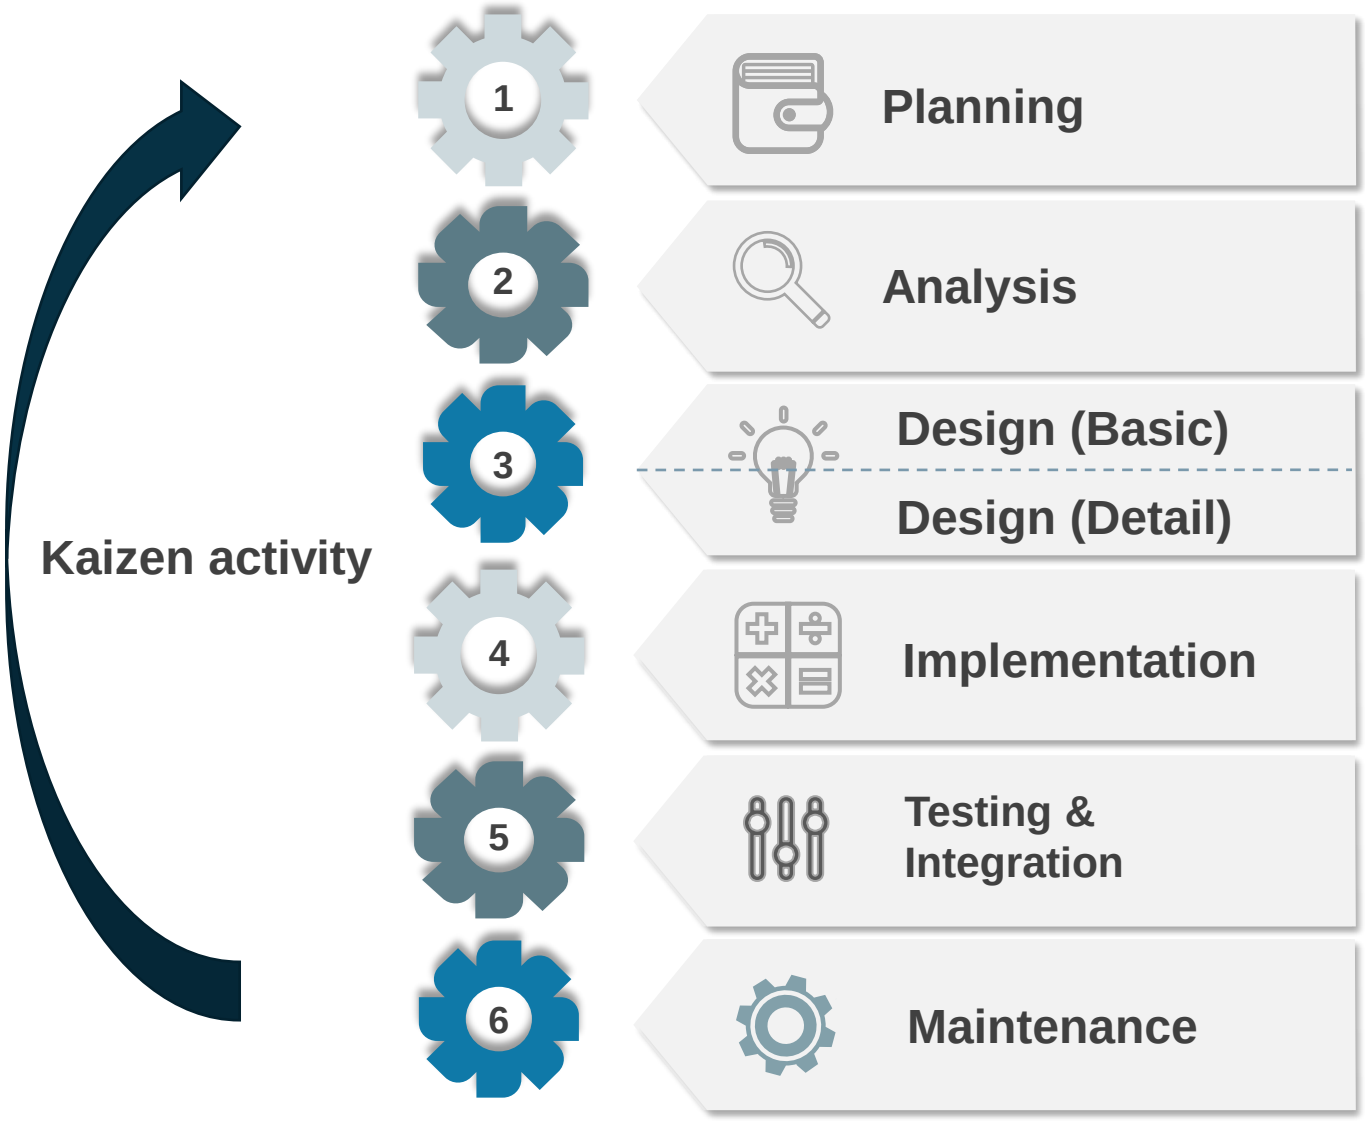
We offer the energy supply equipment essential to factory operation (electricity, steam, hot and chilled water, air conditioning) as “Energy Center” package, tailored to your needs.





# Energy Management Development Cycle

CONFIDENTIAL



***Support by MHI without fee***

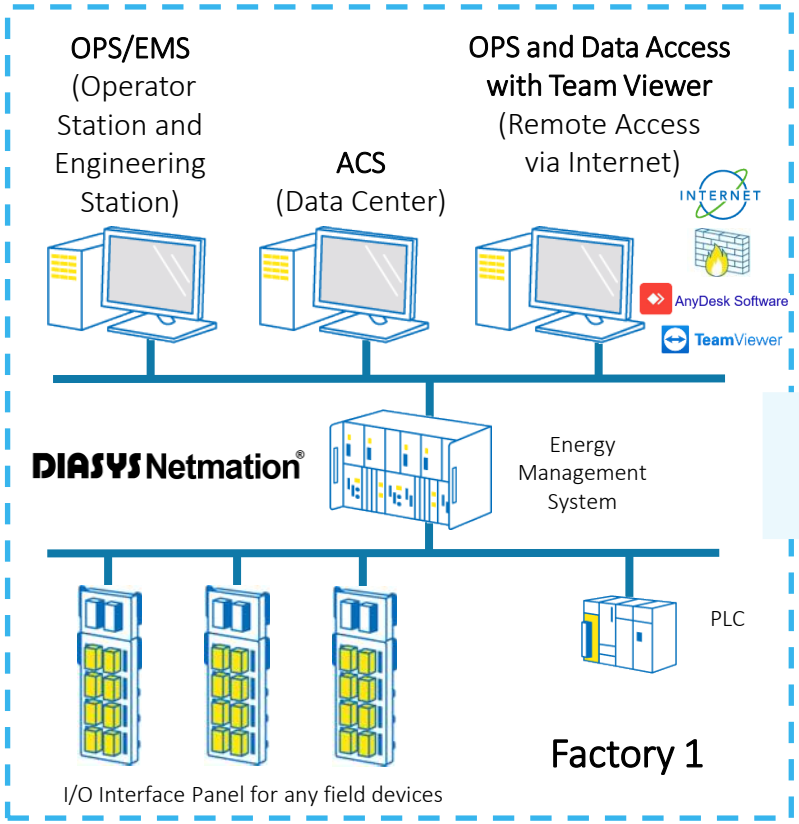
# Features - Benefits

CONFIDENTIAL

Management Level is able to access to Energy Management System via Smart phones / Tablet / Notebook

- Access to operator screens
- Access to the energy report
- Access to the utility cost report

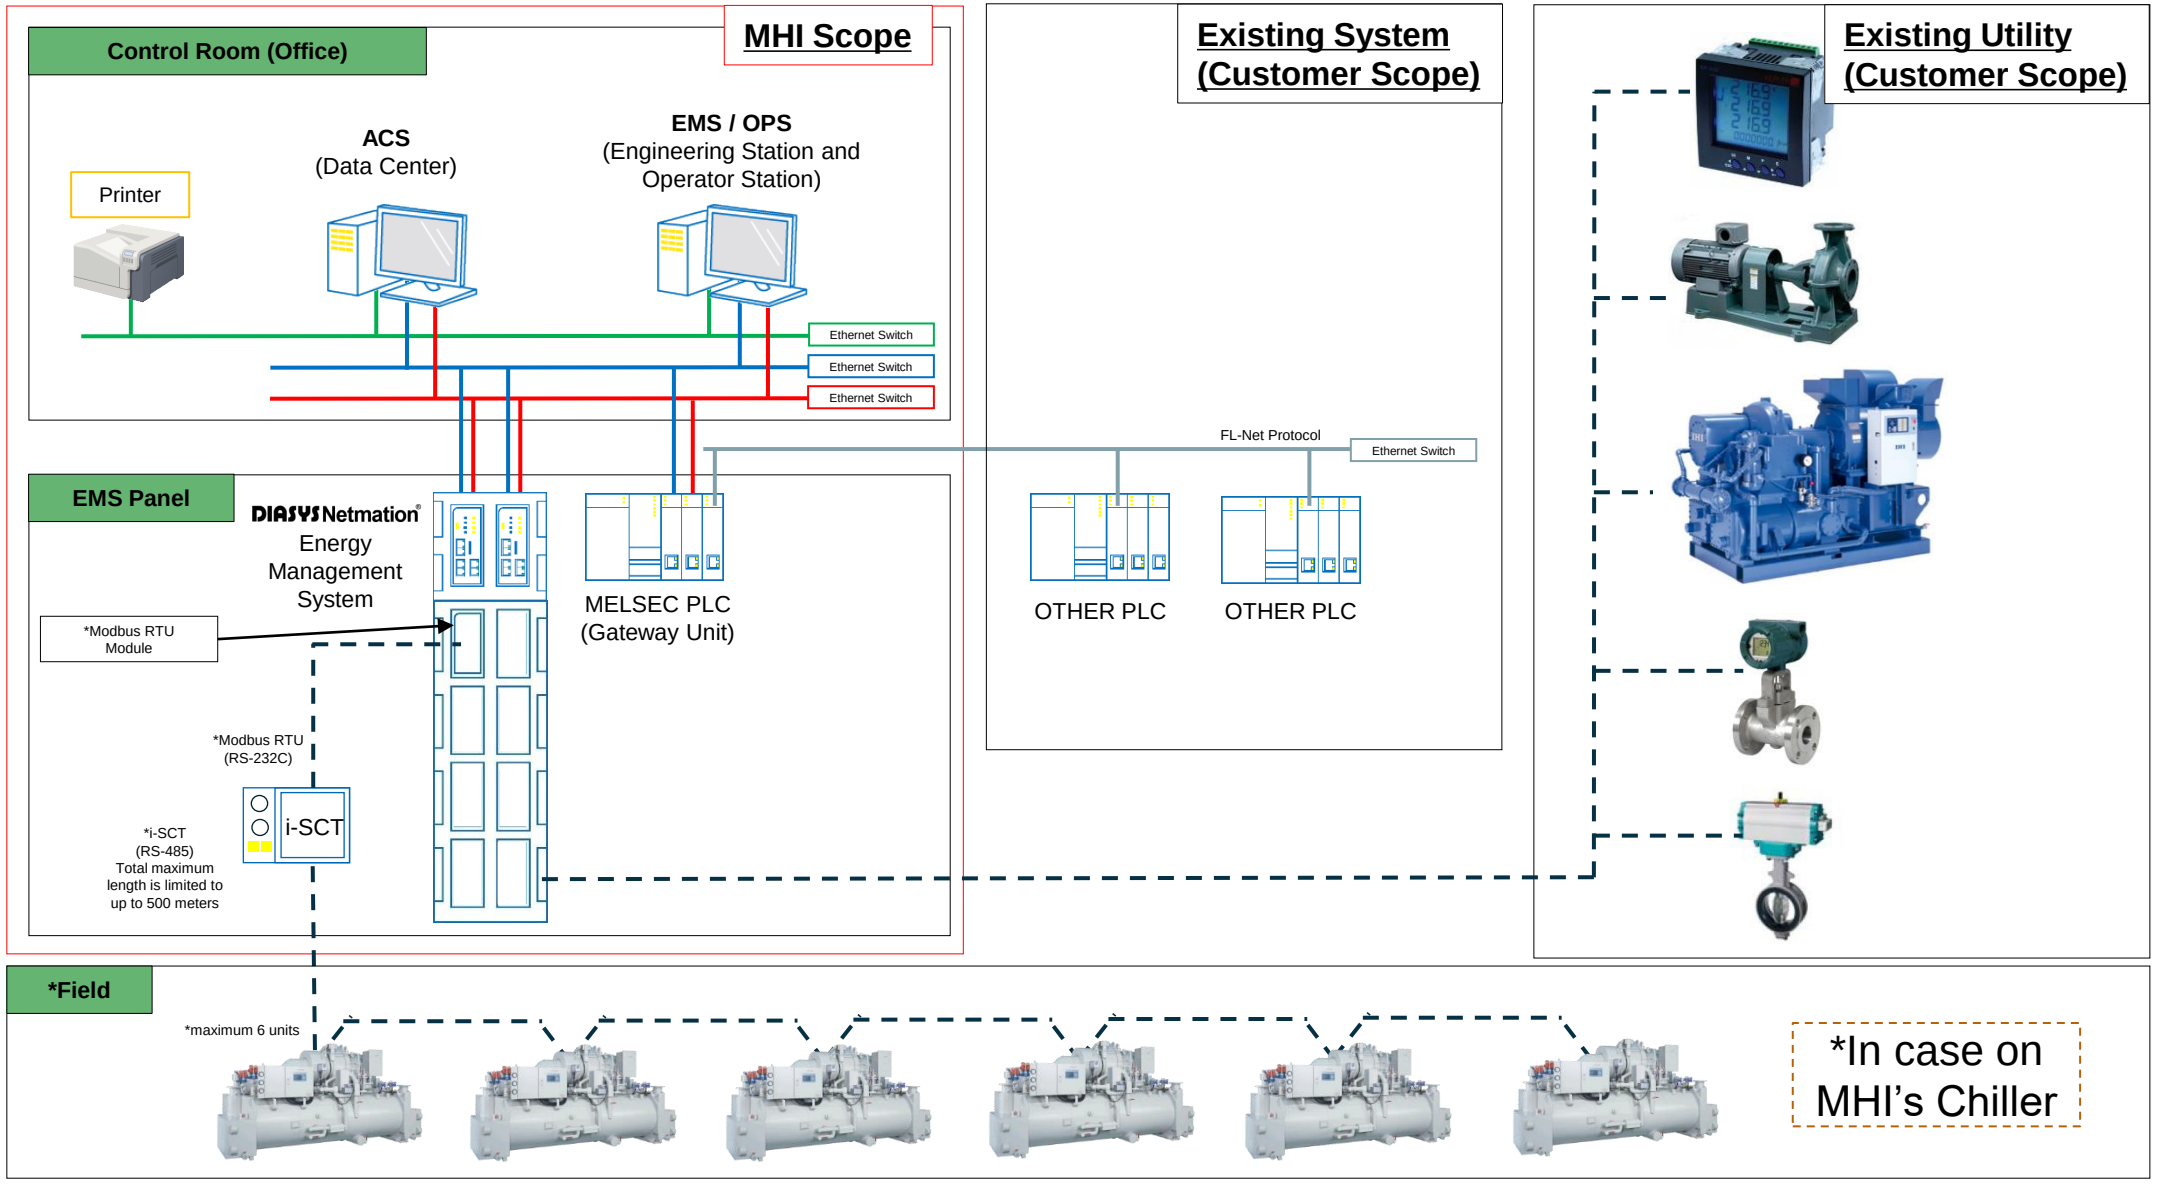


## Features and Benefits

- Real-Time Utility's Cost Monitoring for each shops, each production lines
- Real-Time Machine Status Monitoring such as chillers, air compressors, and boilers
- Real-Time Machine's Efficiency Monitoring
- Waste/Loss Energy Monitoring
- Real-Time Trend Function Monitoring for operator
- Automatic Reporting
- Automatic Alarming
- Remote Monitor via Smart Phone
- Reduce OPEX for long-term maintenance
- Communication with the existing system (PLC, DCS, SCADA)

# System Configuration Supply

CONFIDENTIAL



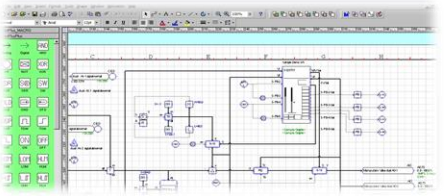
# Software Main Features

CONFIDENTIAL

SOFTWARE MAIN FEATURES

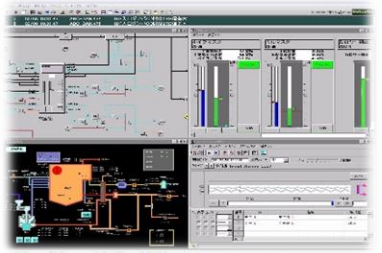
## Logic Modification

- ✓ Easy to expand, modify, upgrade ⇒ Reduction of cost
- ✓ No skill required (Function box language based on Microsoft VISIO)
- ✓ Modification, upgrade and expand are allowed



## Window Layout Flexibility

**Netmation focuses on the useful operability of monitoring and operation screens.**
In Netmation, it is not necessary to fix monitors for some specific purpose. By mouse operation, the scalable structure of multiple-screens is available and saving of screen layout as “My favorite” is available.

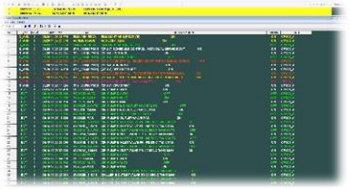


## Automatic Reporting

- ✓ Daily report and Monthly report
- ✓ Automatically printing able to be set

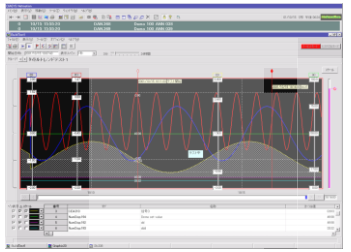
## Event Alarm Detection

- ✓ Buzzer is included
- ✓ Alarming priority can be set



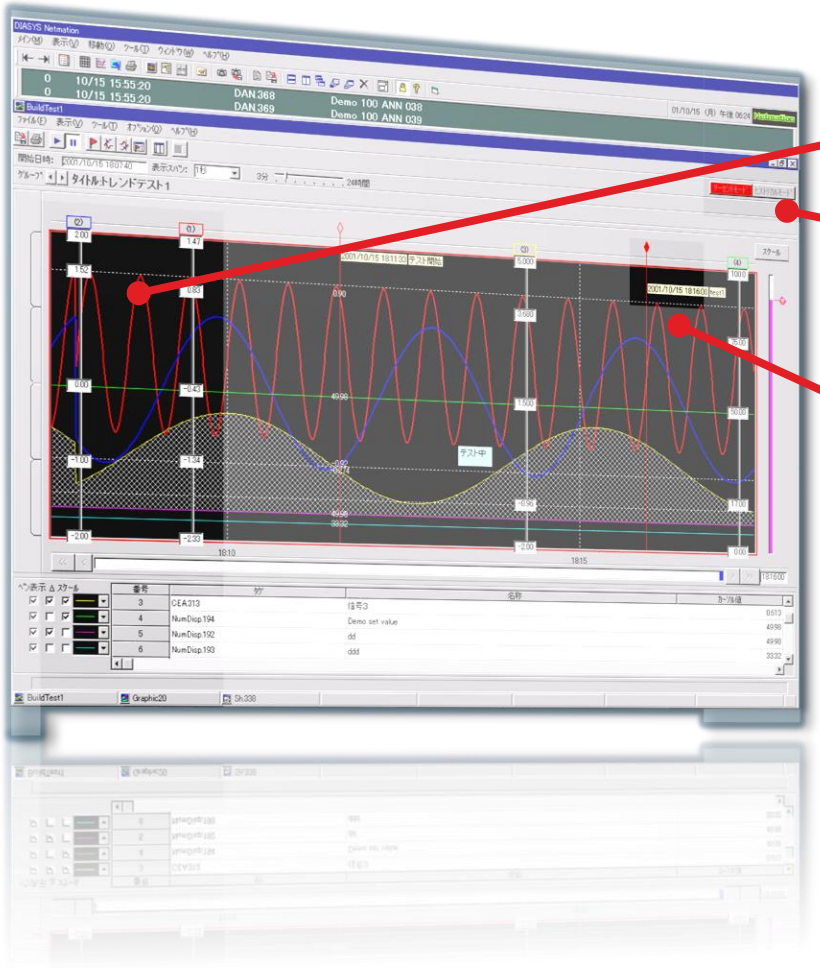
## Trend display as Report

**Netmation focuses on the sufficient usability to support monitoring and reporting work.**
“Monitoring convenience” enables Operator to use screen image as report on paper.

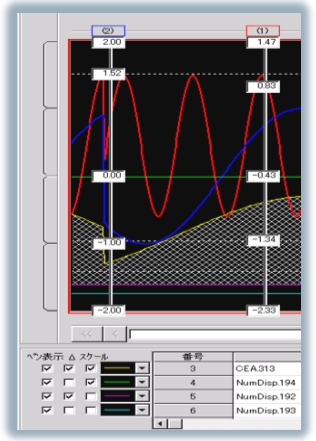


# Trend Function

CONFIDENTIAL



## Trend display as Report



**Useful function (1)**

- Many selections of background color, line color and line type

- Flexible scaling

**Useful function (2)**

Recent mode: displays real time data
Historical mode: displays historical data

Data collection cycle and time can be set as you like (according to storage capacity). * *

**Useful function (3)**

Post-it and flag marking are included as standard. The flag can be set by drag & drop from alarm/event. The information traceability is upgraded.

** Standard setting of each mode (It is settable according to storage capacity.)
The standard data collection cycle and time of each mode (recent / historical) is as follows.
- Recent mode: 1-second cycle within 24 hours
- Historical mode: 10-second cycle, over 24 hours and up to 31 days

Part . 2

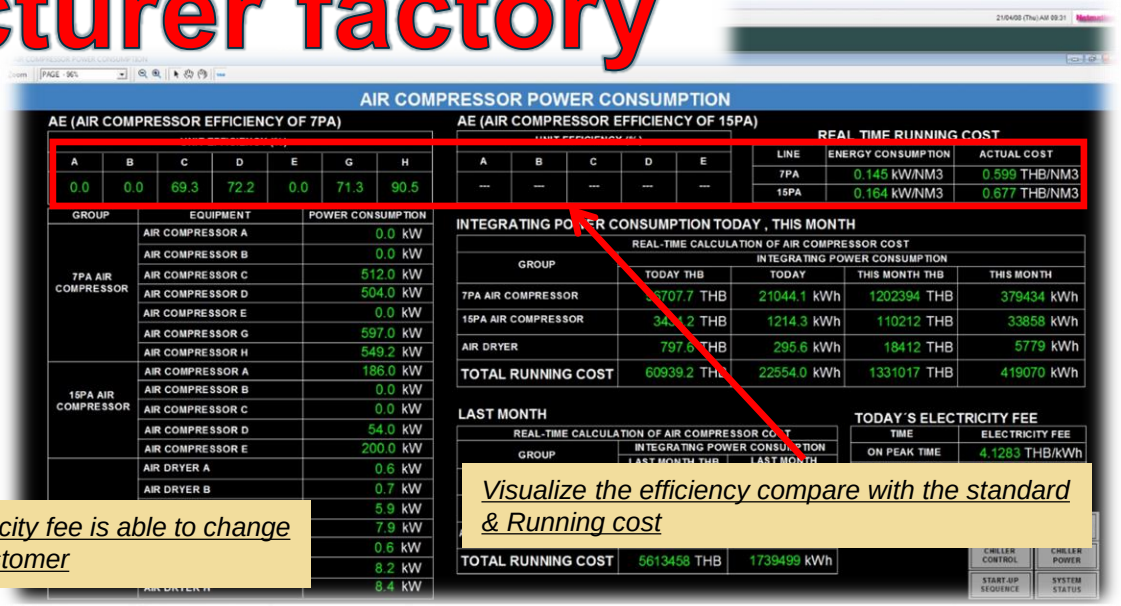
# Yarn manufacturer factory



*Electricity fee is able to change by customer*

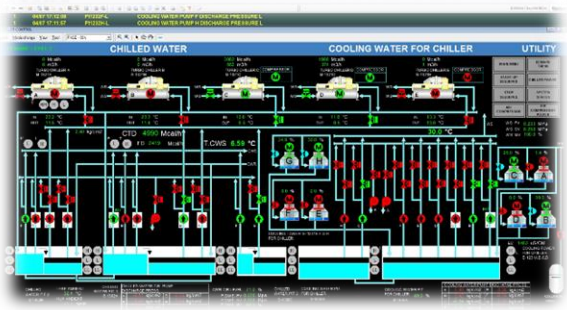
*Visualize the efficiency compare with the standard & Running cost*

# Success Stories – Yarn Manufacturer

CONFIDENTIAL

06

**Improvement of chiller system (Feb 2021)**
- Replacement of 1 existing chiller with MHI high efficiency model (Fix)



04

**Further Improvement (June 2016 to March 2018)**
- Replacement of 1 existing chiller with MHI high efficiency model (VSD)

05

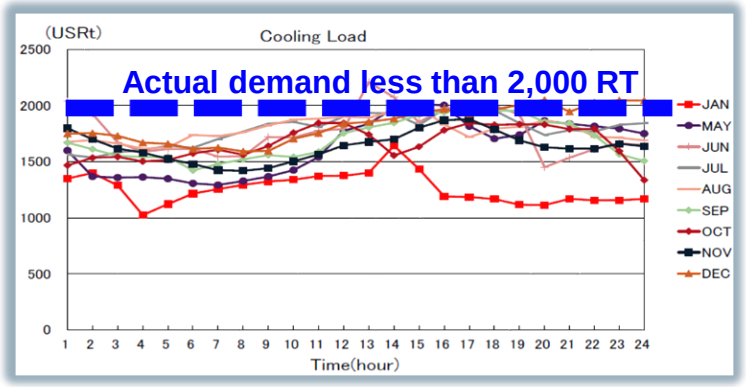
**Air Com Efficiency Monitoring (March 2019)**
- Efficiency monitoring and reporting
- Cost monitoring and reporting
- Loss monitoring

02

**MHI Solution (May 2015)**
- Automatic start and stop of Chillers and Aux. equipment by EMS considering factory demand

03

**Effect of Improvement (May 2015 to March 2016)**
- 10% of Energy Cost Saving with ROI: 2.5 year (EMS + Modification of valves and sensing devices)



01

**Monitoring, Visualization & Analysis (Sep 2014)**
- 3,300 RT (1,100 RT x 3 sets) Chilled System always operated in manual
- However, actual thermal demand is less than 2,000 RT

# Success Stories – MSG Manufacturer

CONFIDENTIAL

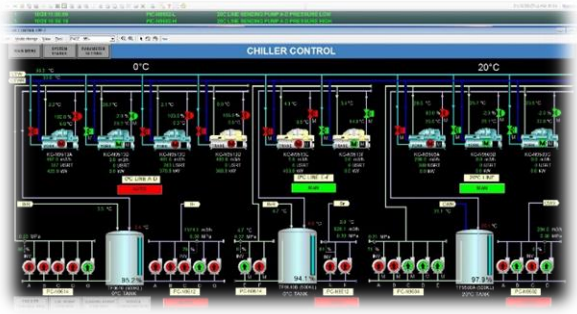
**Modification of chiller system (Feb 2022)**
- Add blackout function to chiller system Utilities 1 combination with new biomass power plant 9.9 MWe

06



**Further Improvement (Jan 2019)**
- Full auto control running
- Actual ROI: around 1.5 year

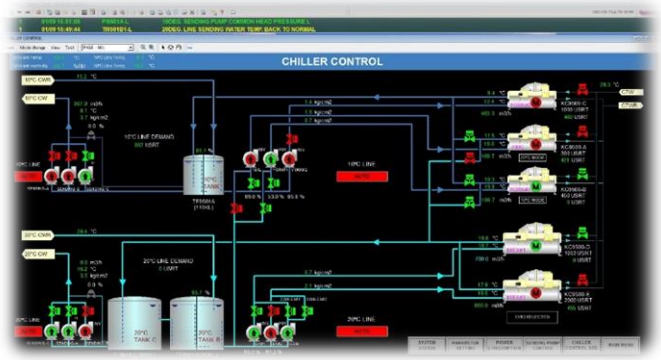
04

**Chiller Optimization for Utilities 2 (Dec 2021)**
- Established EMS separately from Utilities 1

05

**Chiller Optimization for Utilities 1 (May 2017)**
- Automatic start and stop of Chillers and Aux. equipment by EMS considering factory demand
- Run priority chiller

02



**Support customer (Jun 2017 to Dec 2018)**
- Equipment fixing consultation by MHI
- Valves and sensing devices modification
- Programming modification

03

**Data Analysis (2016)**
- 5 sets of chiller operation manner analysis.
- Chillers always operated in manual
- Actual thermal demand is less than 2,000 RT

01

**Improvement of power monitoring (*Under designing*)**
- Include Plant#1, Plant#3, Plant#6 to EMS.

04

**Power monitoring system (June 2020)**
- Established EMS for power monitoring Plant#2, Plant#5, Plant#7

02

**New power meter installation (Apr 2021)**
- Installed Plant#1, Plant#3, Plant#6 power meters and cable wiring.

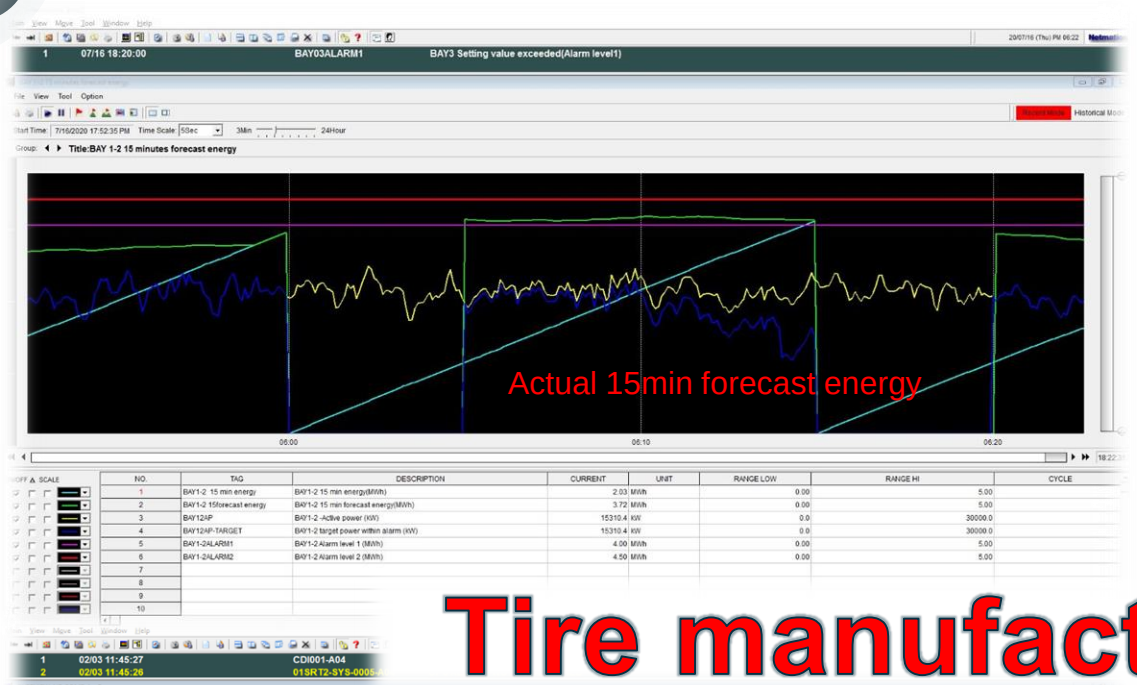
03

**Analysis for EMS (Nov 2019)**
- First step for EMS, plant by plant monitoring
- Focused on the most energy usage plant

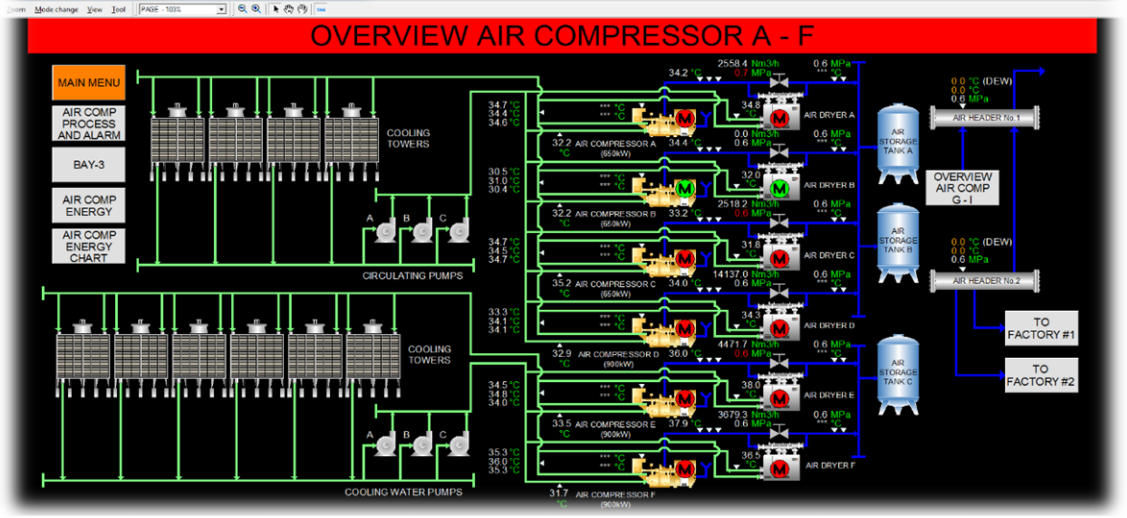
01

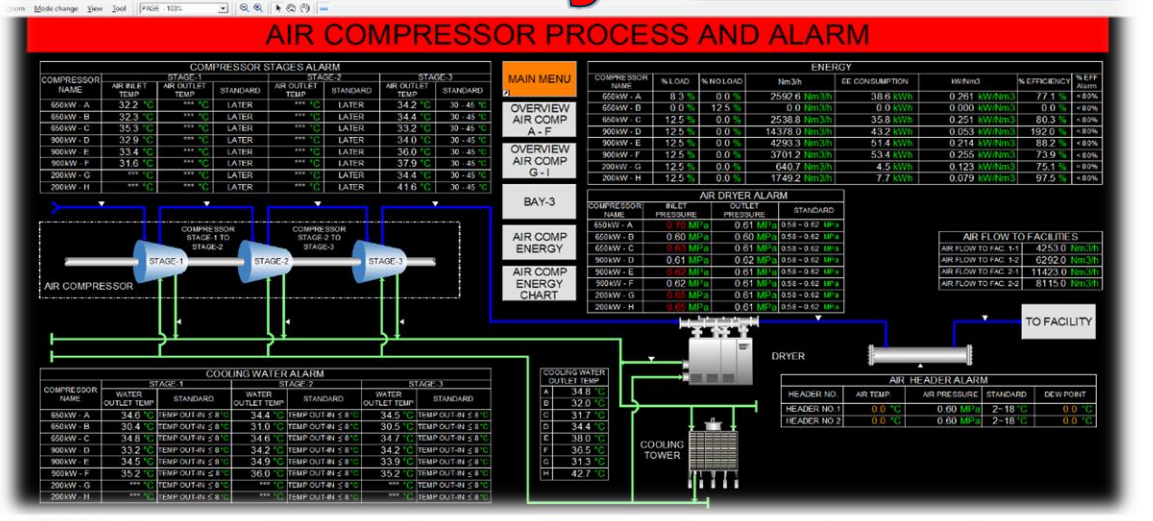
# Success Stories – Tire Manufacturer

CONFIDENTIAL



# Tire manufacturer factory



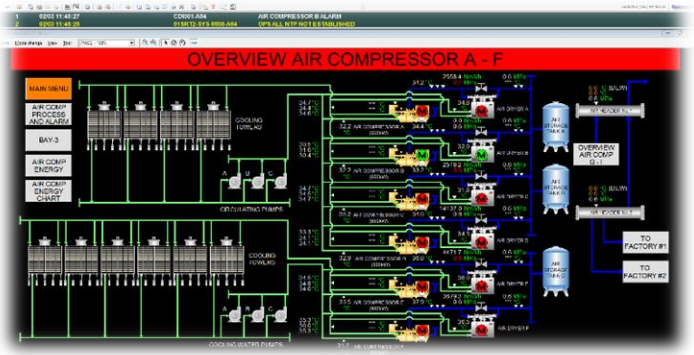


# Success Stories – Tire Manufacturer

CONFIDENTIAL

**Air compressor monitoring (Jan 2022)**
- Efficiency monitoring and reporting
- Cost monitoring and reporting

04



**Power monitoring system (Aug 2020)**
- Established EMS for power monitoring the most consumer machine such Mixer.
- Peak-cut function alarm.

02

03

**Air compressor monitoring (Apr 2021)**
- Extended project for air compressor monitoring system

01

**Analysis for EMS (2019)**
- First step for EMS, power monitoring for Mixer machine.
- Customer problem is the fee of peak power charge is too high.

Forecast in each 15 minutes time slot is updated every minute, simply based on now and 5 minutes before data.
