

Hydraulic Compression Force Transducer Lathe Chuck - Version

Forces from 1.1 kN up to 1,000 kN

F1103 – ND 3x6
F1112 – ND 3x16
F1122 – ND 3x33

Description

Hydraulic compression force transducer for use in lathe chucks.

Hydraulic force measurement is an easy way to measure and display force in various applications.

The force measurement utilizes the hydraulic principle: The force applied to a piston generates a hydraulic pressure, which is displayed with an indicating device. The scale of the indicating device can show various units e.g. N, kN, kg, t.

Applications for the hydraulic force transducers can be found in apparatus engineering, mining, test and measurement equipment and special mechanical engineering.

The Leakproofness Guarantee is prolonged to five years*. In the unlikely event of a leakage the transducers will be repaired free of charge. Therewith we underline the quality of our products and the trust in our technology.
